

Checklist for Counsel Preparing to Mediate an Environmental Dispute

PRESENTED FOR

ALTERNATIVE DISPUTE RESOLUTION

EDWARD A. COHEN
JUNE 6, 2025

Purpose of this Checklist

- Help prepare counsel for an environmental mediation
- Serve as a “double check” for considering likely issues

Environmental Mediations: Same or Different than Others?

Key issues that are often front and center

1. What are the basic facts?
2. What are the claims?
3. What are the anticipated defenses?
4. Can you achieve finality and, if so, how?
5. What is the status of insurance, indemnity, and contribution?

Hypothetical for illustrative purposes

- Property A now owned by Newco
- Prior owner of Property A was manufacturer that released chemicals in the 1960s and 1970s

What are the basic facts?

What contaminants of concern (COCs) are at issue

Have COCs moved from Property A to Property B
Or are COCs threatening to move there

How and Where did the COCs migrate?

Where are the COCs now

- Nearby residential community
- Water body
- Other

How did the COCs get there

- air stack emissions
- surface dust blowing
- surface water runoff
- groundwater migration
- storm drains/sewers
- or something else

Other basic facts to know

Migration direction

- Which way does groundwater or surface water flow
- What is the prevailing wind direction

Nature of the chemical at issue

- Does it biodegrade
- Is it a 'forever' chemical or an otherwise persistent chemical

Other basic facts to know

Are there human exposure routes

- Is drinking water involved
- Is vapor intrusion a concern
- Are people exposed on the ground surface

What is the level of toxicity

What are the claims?

WHAT IS
BEING CLAIMED?

BASIS OF LIABILITY
(STRICT OR
FAULT-BASED)

IS CLAIM PURSUED BY
STATUTE OR COMMON
LAW OR BOTH

What can be sought from these claims?

- Actual damages
- Penalties
- Remediation cost reimbursement
- Punitive damages
- Injunctive relief (cleanup to occur or medical monitoring)
- Attorneys' fees

What are the anticipated defenses?

- My client only contributed a small quantity
- My client contributed a lot by volume but most of it was not toxic
- My client is not the legal successor of the entity at issue
- Any special CERCLA (Superfund) defenses
 - E.g., bona fide prospective purchaser
- Statute of limitations
- Coming to the nuisance
- Federally permitted release
- Other

Also consider:

Implications of joint and several vs several liability

Will a settlement achieve finality?

WILL OR DOES THE
SETTLEMENT INCLUDE
A “REOPENER”

WILL THE SETTLEMENT
YIELD CONTRIBUTION
PROTECTION

CAN THERE BE
FURTHER LITIGATION

Can there be further litigation

Natural Resource
Damage claims

Private property owner
claims separate from
government claims

- Property damage
- Bodily injury

Citizen suit claims

A good place to manage client expectations!

What is the status of insurance, indemnity, and contribution?

These issues have one point:

Can you get someone else to pay?

The concepts are complex.

Insurance

- Environmental lawsuits involving releases from decades ago:
 - Need to look for old policies
- Are any older policies triggered
 - Incidents, releases or leaks during the policy period

Insurance

- Pollution exclusion clause (depends on timeframe)
 - None (older policies)
 - “Sudden and accidental”
 - Absolute pollution exclusion
- Other policy exclusions

Insurance

- Duty to defend vs duty to indemnify
 - Why is this important in environmental cases
- Does the policy erode
- Excess policies
- Allocation among policies
 - “All sums” vs pro rata
- Policies *providing* pollution coverage
- Notice to carrier

Contractual Indemnity

Not in the insurance
context

Was there a prior
purchase and sale
agreement

Was there a
commercial lease with
tenant undertaking
obligations in the event
of a release by tenant

Contribution

CERCLA
(Superfund)
contribution
addressed
by statute

Common law
contribution

Can be very complex!

Further considerations *in preparing for a mediation*

What if a settlement not reached

- Best alternative if litigated
- Worst alternative if litigated
- Costs for both (attorneys' fees and damages/remediation costs ranges)

Why do these calculations before mediation?

- So you have something in which to compare offers
